Installation Guide

To install and run the Memory Game, please make sure you have a PHP MySQL installation. I used a LAMP server.

Please follow these steps to deploy to your LAMP server –

1. Unzip the package and keep it in your web root folder.
2. Use memory-game.sql (**sql/memory-game.sql**) file kept in sql folder of the package to create database required, you can directly import it using phpmyadmin.
3. Open **db-config.php** and edit the following four lines

   > $db_host = 'localhost'; (Your hostname)
   > $db_user = 'root'; (Your database username)
   > $db_password = 'password'; (Your Password)
   > $db_name = 'memory_game';

4. Access the package folder with your server url (eg.: http://localhost/memory-game) to play the game

Hope you enjoy it.
